

Melbourne Polytechnic's Electrotechnology Department was looking to introduce a training delivery and reporting system that would meet the increasing industry compliance demands and put them at the forefront of electrical training in Australia.

When the opportunity came up to consider Energy Space, it was the dual benefits of resource and assessment development coupled with industry validation and compliance documentation that made Energy Space the right choice.

- Melbourne Polytechnic have successfully passed their ASQA audit using Energy Space tools
- The Energy Space Learning Management and reporting system has provided a cost saving of \$138k per annum on wages for resource development and administration
- Anecdotal evidence is showing apprentice assessment pass rates have increased for those apprentices fully utilising the Learning Management System

“By using the Energy Space resources and assessments we have confidence that the requirements of the training package are being met. We have recently been through ASQA re-registration audit, not only did we pass audit but we met all compliance aspects in relation to validation, assessment mapping, knowledge & skills development and student feedback, we can attribute this to the hard work and dedication of our staff in implementation and utilisation of the Energy Space tools”

Michael Salvage, Senior Educator, Melbourne Polytechnic

“The support from the Energy Space team for the initial implementation of the system and ongoing professional development of our staff was outstanding”

Michael Salvage, Senior Educator, Melbourne Polytechnic

Melbourne Polytechnic was looking for a solution to allow their teachers the opportunity to spend more time developing and mentoring their apprentices in the classroom. Prior to Energy Space, all development work and administration was being completed in house by teaching staff; Melbourne Polytechnic found that this was taking an enormous amount of man hours to meet increasing compliance needs.

Energy Space presented itself as the most complete solution on the market and the Learning Management System and Lighthouse Reporting system was introduced at Melbourne Polytechnic in January 2015.

Since the implementation of Energy Space, Melbourne Polytechnic have realised a number of benefits. They have successfully passed their ASQA re-registration audit and resource development and administration time has been reduced by approx. 1200 hours per annum, allowing the teachers more quality time in the class room to focus on the development of their apprentices.
